SYSTEMS AND PROCEDURES JOURNAL

annual index of articles

January–February

10 **Evaluating Managerial Capability**
A decreasing pool of talent from which to fill the managerial class confronts us, thus making management selection and development one of the pressing problems facing the nation.
Charles M. Gerold

20 **Designing The Participative Decision-making System**
There is a need for finding more meaningful work situations wherein self-development, emotional health and freedom of both action and thought are significant values.
Bruce DeSpelder

25 **Overcoming Management's Resistance To Change**
Seven elements are necessary to the conduct of a successful professional staff project if the staff man is to develop the confidence which will lead to management acceptance.
Richard M. Paget

28 **Is The Total Systems Concept Practical?**
The reason for lack of consistency in definition of total systems lies in the fact that the concept as thus far developed is very nebulous.
A. T. Spaulding Jr.

34 **How Not To Take System Oscillations For Granted**
Our ignorant reactions to these common occurrences are more extensive than they should be, for we can reduce oscillations to the point where they no longer have their present effect.
Jack R. Lander

37 **What Scares Me About Being A One-man Department**
What happens when the "one-man band" type of systems generalist is so successful that he works his way out of a job?
Eugene C. Rice

40 **A New Look At The Systems Profession**
Its status has not increased commensurately with the economy. Is it because its members have become hardware-oriented rather than people-oriented?
W. A. Stehle

March–April

14 **Let's Look At Short Interval Scheduling**
Although there is really nothing new or radical behind it, S. I. S. will improve productivity and reduce expense through extra control which is obtainable at the lowest possible cost.
Maurice A. Murray

20 **Needed: Management Systems Research**
The time is ripe for pure study of the administrative process in order to develop a meaningful and pragmatic approach to the advancement of management systems philosophy.
Edward Tomeski

24 **Concepts Of Management Gaming**
The development of computers and mathematical techniques which permit quantification of the interrelationships of various company activities has stimulated the growth of "management games." This presentation will discuss the important objectives, benefits and limitations of gaming.
Nicholas Radell

30 **The White Collar Dilemma**
A consultant who is called in to solve company white collar problems shows how he goes about it and how important company systems and procedures specialists are to the success of any such program.
Cyrus Falconer Jr.

38 **Communications, Parallel Runs And Effective Systems**
Parallel runs are, in reality, an admission of ineffectiveness and often create additional problems in starting up a systems program. More emphasis is needed on communications among people to direct our revolutionary technology.
John F. Barnicle

May–June

12 **Joint Man/Machine Decisions**
Problem: how to provide man with the computer aid to achieve "best" final control without divided responsibility between himself and the machine for the right-or-wrong portion of vital, on-line decisions.
Howard A. Thompson

17 **Why Run Computers Tail-first?**
The addition of a Simplified Operating Procedure to current programs reduces computer idle time by disassociating programming techniques from day-to-day operational methods.
Gordon A. Peters

20 **Pioneers In Motion And Time Study**
Aside from Taylor, these others—the Gilbreths, Gantt, Emerson, Cooke—contributed generously to the refinement of this integrated work measurement method.

32 **An Application Of OR To Work Measurement**
The extension of operations research by combining work sampling concepts with multiple regression analysis can evolve a new approach to work measurement.
Joel Zelnick and M. Skigen

35 **Job Engineering—The Second Half Of Value Engineering**
The techniques involved in V.E. have been developed to the degree that jobs and functions can be engineered to the same extent as hardware.
Robert L. Blake

38 **Computer Simulation In Inventory Management**
Given a carefully developed model, simulation techniques provide a powerful tool in this important area.
William H. Lawson

42 **Pinpointing Production Control To Suit**
Time and quantity are two basic ingredients in the establishment of a production control system which must be flexible to meet changing conditions.
James P. Jensen

50 **Guidelines For Management Oneupmanship**
The tendency to subsconsciously sacrifice the human qualities of management to the technological can contribute to an undesirable gulf between manager and staff.
D. V. Baker

July–August

12 **Group Participation For Reorganization**
The technique described here, which is devoid of subjective reasoning, can produce better organization, increased efficiencies and reduction of costs.
Robert W. Aukerman

18 **Is Your Organization Out Of Control?**
Management may be inclined to accept the structure just because it's there and they're used to it, even though tendencies are constantly at work to make it unwieldy.
Charles W. Barkdull

33 **Midnight On The Ward—Nurses Count Noses**
Daily positive knowledge of the whereabouts of 47,000 persons in California's state hospital system is made possible with a revised census reporting procedure.
Vincent P. Svilich

37 **Organization Of A Stores Census**
An interesting analysis of actual stores investment in any organization with regard to major and minor value consumption and major and minor investment can be easily obtained.
Anton M. Groot, Anton M. Groot Jr.

40 **The Human Side Of A Systems Change**
Planners of change cannot depend solely upon the organization chart because, fortunately or unfortunately, an organization is made up of people.
Lawrence K. Williams

44 **Management Systems And The Exception Principle**
It is up to the systems analyst to structure perception into management systems through balance of design in order to make the exception principle operable.
Arthur L. Svenson

September–October

10 **Supervisory Systems: The Last Frontier**
Since most subordinate managers don't know what is expected of them, there are great possibilities in supervisory systems.
George S. Odiorne

14 **What The Future Holds**
Prospects of a veritab' "datacracy" loom before us, conjuring up a bewildering vision of the future. Is it good omen for the systems man?
Gibbs Myers

22 **Industry's Need For The Uncommon Man**
Human resources must be stretched in terms of capability and flexibility; there is a need to get greater distance out of people and greater diversification from them.
Mark B. Silber

28 **Management Projects And The Consultant**
The employment of outside assistance to put over a management project doesn't mean that corporate executives are not responsible for its progress.
Robert B. Johnson

32 **Tell Them**
A good procedural format should be a catalyst whose logical sequential flow instills confidence.
George H. Von Fischer

36 **The Working Environment**
Space and layout planning of offices is rooted in two prime considerations: Maximum economy and maximum health.
Mary Lyons

40 **Classification For Instruments And Equipment**
Control of increasing amounts of test gear needed for research and development activities is necessary.
C. J. McGarr; R. C. Clifton; J. L. Hollenbeck

42 **Getting The Show On The Road**
The long pull toward opening day of the World's Fair involved the development of a complete corporate communications structure.
Frederick G. Vogel

46 **Expand Your Outlook**
Here is a list of some functions which could assist in creating an awareness among management people of the need for systems.
Otto P. Kramer

November–December

8 **Five Steps To Quality Control of Clerical Operations**
Here is a reasonably priced program, which, if given regular attention and adjustment, pays for itself over and over again.
V. N. Andersen

14 **Wanted: A Concept For Employing Systems Effectiveness**
What is needed is a structure of thought upon which to build programs for employing systems for full effectiveness.
John A. Beckett

18 **Network Techniques: A Means For Evaluation**
There are many routine administrative and operating procedures which are amenable to network analysis even though they do not have the characteristics of massive projects.
Granville R. Gargiulo

26 **Try The Simple Method**
Quite often the obvious is overlooked in the quest for a solution to a problem because of the tendency to think only in electronic terms.
Norman Farmen

28 **Management Ploys Vs. Systems Tactics**
Before he can begin to use his skills, the systems man must get past the operating manager and into the department(s) concerned.
Ralph E. Steere

34 **The Organization: Static Structure Or Dynamic System?**
The preservation of short-run equilibrium, once the concern of all management thought, can now be delegated to middle management, computer-actuated decision tables, or both.
Seymour Tilles

36 **Why Not Practice Human Relations?**
Managers need not become psychologists or counselors; but they must envisage a more employee-oriented approach to systems and organization changes.
Elmer V. Grillo
